iZone Sustainability Statement

Made with Care.

At iZone Imaging, sustainability is part of how we source, manufacture, and work every day. From responsible paper sourcing to efficient production and waste reduction, we continue to improve our environmental practices alongside the quality and performance of our Custom High Pressure Laminate (CHPL).

Responsible Sourcing

The majority of the paper used in our panel cores comes from suppliers with Forest Stewardship Council® (FSC®) Chain of Custody certification using the Controlled Wood Standard. We work with our suppliers to support responsible sourcing throughout our supply chain.

Thoughtful Manufacturing

Our integrated manufacturing facility in Temple, Texas, brings production together under one roof, helping us operate efficiently and reduce our environmental footprint.

A Stable Finished Material

Our manufacturing process uses no solvents or toxic chemicals. Finished iZone CHPL is chemically inert and does not emit harmful volatile organic compounds (VOCs), making it well suited for applications involving the storage or display of fragile archival materials.

Long Life and Fewer Replacements

Durability is an important part of sustainability. When panels remain in service longer, fewer resources are needed to manufacture, transport, and install replacements—and less material enters the waste stream.

With the appropriate grade, proper installation, and routine care, durable CHPL panels can support long-term use in demanding environments. At iZone Imaging, we see lasting performance as more than a product benefit. It is an opportunity to conserve resources over the life of a project.

Sustainability and Your Project

For projects pursuing LEED certification, review the applicable rating system and version to determine how material sourcing, manufacturing location, and emissions documentation may support your project's requirements.

Credit eligibility depends on the specific product, available documentation, and project criteria. Supplier FSC certification does not, by itself, establish FSC certification of the finished iZone product.

Planning a project with sustainability requirements? Contact iZone Imaging to discuss your material needs and available supporting documentation.
