## Jarrell Middle School

Jarrell Middle School  
Themed Graphics Wall Systems  
Jarrell, TX

**Designers:** O'Connell Robertson Architects  
with Jarrell ISD Teachers

**Fabricators:** Panel Specialists, Inc.

The town of Jarrell, Texas, located in central Texas, was founded in 1909 at the intersection of an old stagecoach road and the proposed right-of-way for the new Bartlett and Western Railway.

Today, Jarrell is a fast growing but close-knit community located on busy Interstate 35 and its citizens proudly boast one of the top-rated school districts in the state.

In April 2012, the Jarrell Independent School District Board of Trustees initiated a comprehensive program to build a new middle school at the site of the current middle school campus. After holding collaborative planning meetings with the school staff and the entire community, a design solution was created. The design included expanded classroom and core spaces and provided natural light and views to the outside from every classroom. Thoughtfully included were a large and easily accessible library, performance stage and outdoor eating area.

Also incorporated into the design were three unique floor-to-ceiling wall-length themed graphics that were designed by O'Connell Roberts Architects in collaboration with the middle school's teachers. In order to capture and protect the vivid graphics represented in these designs, Panel Specialists, Inc. chose iZone Imaging's durable, low maintenance CHPL (custom high pressure laminate) for the graphics.

iZone Imaging's CHPL is scratch and fade resistant, easy to maintain, and is perfect for high traffic areas like the bustling halls of the new middle school. And iZone Imaging's ten year warranty ensures that these special themed graphics panels will be appreciated by many new students and alumni of Jarrell Middle School in the coming years.
